LUSANDA NDLOVU

SAP Integration & Backend Developer

South African Citizen | lusandandlovu0500@gmail.com | 076 262 2198 | LinkedIn: lusandan | GitHub: lusandadotnet

PROFILE

Software developer graduating in November 2026, with SAP project experience across SAP Integration Suite, SAP BTP, backed by two SAP certifications (Integration Developer and CAP Backend Developer). Built asynchronous iFlows, OData integrations and IDoc mappings, plus a CAP-based compliance portal on BTP. Working knowledge of Node.js, Azure and C#/.NET.

CERTIFICATIONS

- SAP Certified: Integration Developer, SAP Integration Suite (Aug 2026)
- SAP Certified: Backend Developer, SAP Cloud Application Programming Model (Aug 2026)
- Microsoft Certified: Azure Fundamentals (AZ-900) (May 2026)
- Professional Certificate: Microsoft Backend Developer, Coursera (May 2026)

PROJECTS

Clean Core B-BBEE Vendor Portal | SAP BTP, CAP

- Built a supplier B-BBEE compliance portal on SAP BTP using CAP (Node.js), SAP HANA Cloud and Fiori Elements.
- Modelled the CDS domain and implemented the DTIC recognition level rules and certificate expiry/validity checks.
- Integrated Azure AI Document Intelligence to extract BEE level, ownership percentages and issue/expiry dates for compliance officer review.
- Implemented a side-by-side S/4HANA integration through the released API_BUSINESS_PARTNER OData API with no core modifications, plus an approval workflow and audit trail with POPIA-aware access control.

Automated Vendor Compliance & Verification | SAP Integration Suite

- Developed a vendor compliance verification pipeline using Parallel Multicast and Local Integration Processes to query mock SARS and CIPC APIs concurrently.
- Configured OAuth 2.0 Client Credentials and SAP BTP Keystore security materials for authenticated external-system communication.
- Authored Groovy scripts with XmlSlurper to aggregate multi-branch responses, apply business rules and determine automated supplier approval or blocking statuses.
- Automated SAP S/4HANA Business Partner updates through authenticated OData PATCH operations for compliance and central-block fields.

Port Delay Auto-Updater & IDoc Integration | SAP Integration Suite, S/4HANA

- Developed an asynchronous integration flow (iFlow) to ingest real time maritime container webhook events and normalize JSON payloads through JSON-to-XML conversion.
- Implemented an OData Content Enricher to query SAP S/4HANA using external Container IDs and retrieve matching Inbound Delivery numbers.
- Built Message Mappings to transform enriched payloads into standard DELVRY03 IDoc structures for ERP-native processing.
- Implemented Global Exception Subprocesses using Groovy and HTTP adapters to capture integration failures and route operational alerts to Microsoft Teams.

TECHNICAL SKILLS

SAP / Integration: SAP Integration Suite, SAP BTP, SAP CAP, CDS, SAP S/4HANA, iFlows, OData, IDoc, Message Mapping, Content Enricher, Parallel Multicast, Local Integration Processes, Global Exception Subprocesses

APIs: Groovy, XmlSlurper, REST APIs, Webhooks, OAuth 2.0 Client Credentials, HTTP Adapters, JSON/XML transformation

Backend: Node.js, C# (.NET 10), ASP.NET Core Web API

Data: SQL Server, PostgreSQL, SQLite

Cloud / DevOps: Microsoft Azure, GitHub, SAP MTA

Tools: Git, Bash, WSL / Ubuntu

EDUCATION

Nelson Mandela University

Diploma in Information Technology (NQF Level 6), Software Development | Expected Nov 2026
